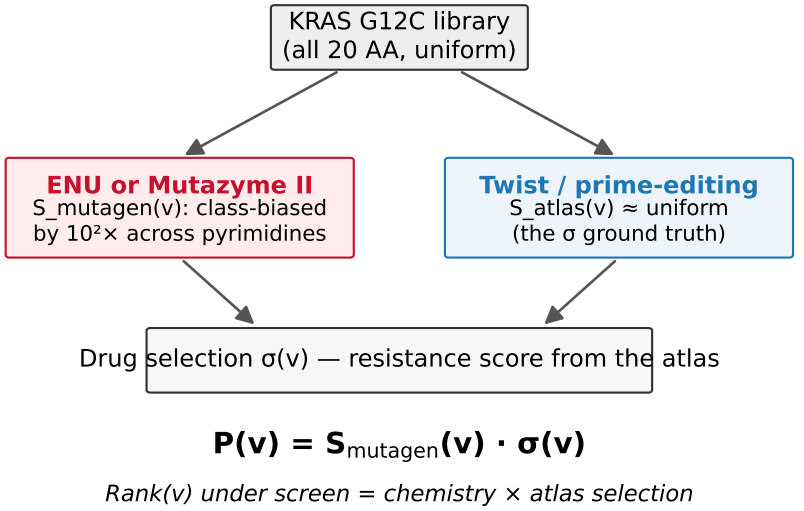

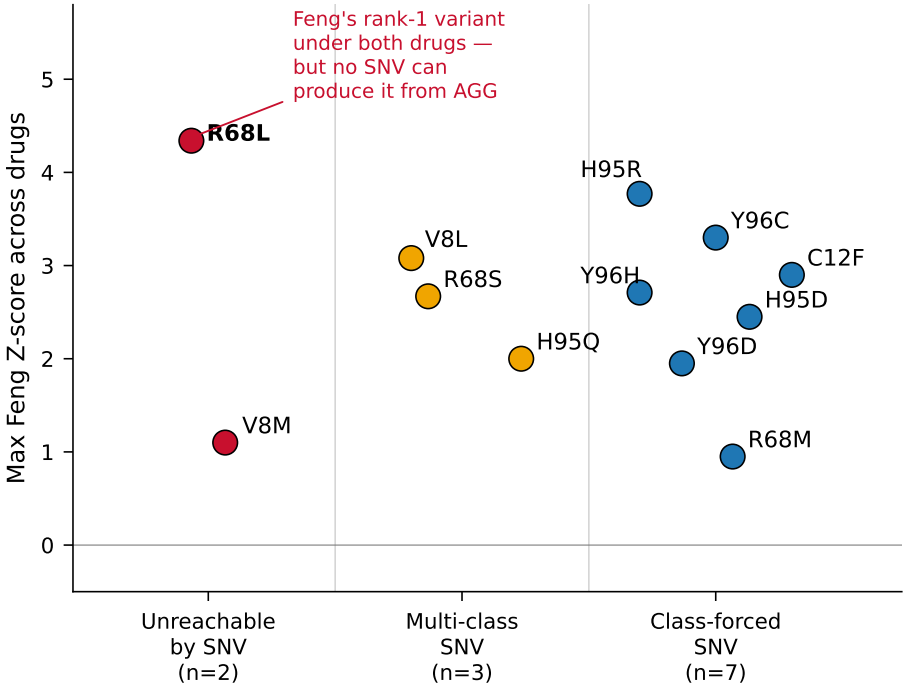

Figure 1 · Chemistry-biased mutagens restructure and sometimes forbid preclinical TKI-resistance rankings

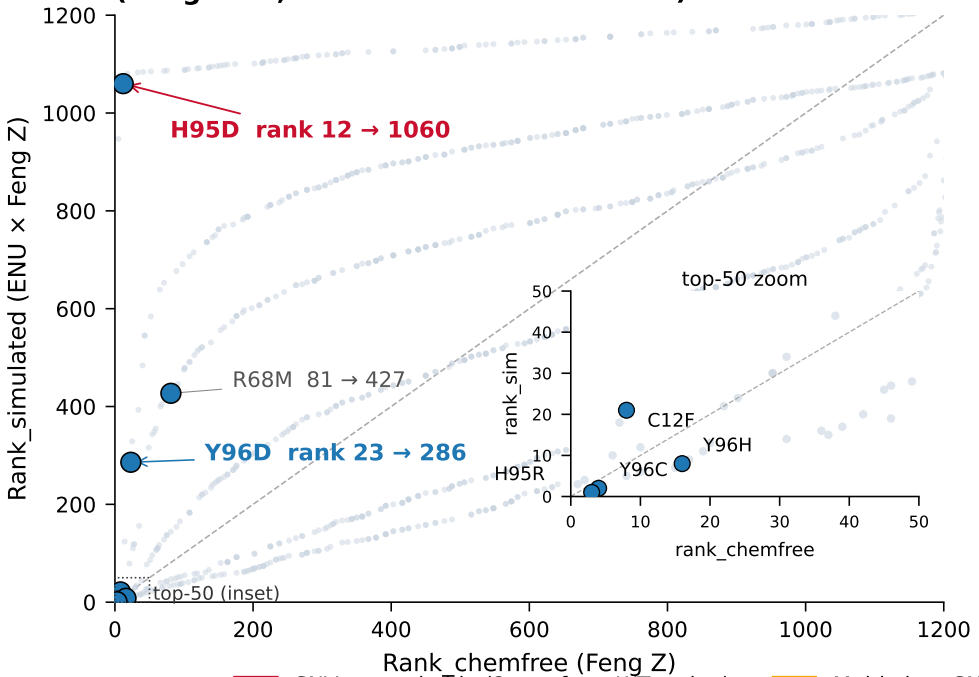

A Supply × selection decomposition

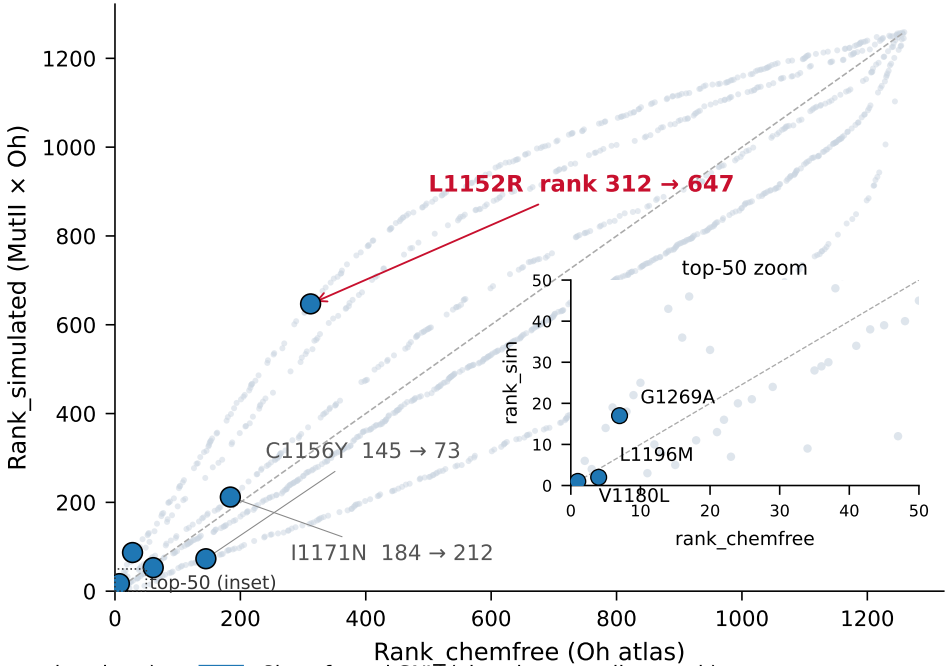

B Awad 2021 clinical variants in KRAS G12C

C KRAS G12C — ENU-simulated vs chemistry-free rank (adagrasib, 981 class-forced variants)

D ALK — Mutazyme-simulated vs chemistry-free rank (alectinib, Oh 2026 atlas)

SNV-unreachable (2+ nt from WT codon) | Multi-class SNV (ambiguous chemistry) | Class-forced SNV (chemistry predicts rank)
